

## MAXLINK PLUS SLATS™

The **MaxLink Plus™** system is an evolution from the **MaxLink™ Industrial** system, for those situations where a greater degree of privacy or screening is desired. Much like the **MaxLink™ Industrial** system, this product utilizes the same unique and efficient system of combining the chain link wire and privacy slat as a *complete package* – no need for using labor to stretch the wire and then come back to hand-insert each individual slat. Stretch the wire... and the job is done.

Using a state-of-the-art high-speed Bergandi weaving/insertion machine, Slat Warehouse can manufacture the specified wire in a 3.5" x 5" mesh, and mechanically insert the **Max-Plus** slat, securing each slat to the wire with a stainless-steel staple, which holds the slat level and secure for years to come.

The **Max-Plus** slat is a double-wall, flat tubular extrusion with three internal support legs for strength and structure, and the addition of specifically angled 'fins' on each side, designed to mold around the chain link knuckle and give up to 98% sight blockage. The entire **Max-Plus** slat is also formulated using High Density Polyethylene (HDPE), combined with additives to ensure color and functionality for many years of protection from exposure to the ultra-violet impact of the sun.

- **Heights** – Available in standard heights of 3', 4', 5', 6', 7', 8', 10', 12'

- **Packaging** – The **MaxLink Plus™** system is produced in 25' rolls at a minimum, and then in 5' increments thereafter. Bulk quantity of the **Max-Plus** slats 'only' are also available for those capable of weaving chain link wire and pre-inserting slats. Each package contains 2,544 pieces individually stacked in a durable wood crate.
- **Warranty** – For details on the limited 30-year warranty for the **Max-Plus** slat (slat only), please contact Slat Warehouse directly or refer to [www.slatwarehouse.com](http://www.slatwarehouse.com). The various wires used for weaving are covered under a separate warranty.
- **Wire Options**

**Galvanized Wire** – **Max-Plus** slat can be woven into three options of GBW (Galvanized Before Weaving) wire. All of our galvanized wire is manufactured with a 1.2 oz. (per square foot) of a protective zinc coating.
